## BEST Flash System

# Multiblitz PROFILUX PLUS Series

**Multiblitz PROFILUX PLUS series is a robust compact flash system designed for mains and battery operation, making it ideal for studio and outdoor use.**

It is available in 200W, 400W and 600W performance classes, with the first two versions offering a 6 f-stop power range and the 600W a 7 f-stop range.

With each unit adjustable by increments of 1/10th of an f-stop, flash duration is as short as 1/3000sec and recycling times as brief as 0.2sec, so photographers can make fine adjustments and have complete control regardless of the shooting conditions they are working under. An integrated 16-channel radio receiver ensures that the remote

operation is both flexible and dependable.

The system is equipped with automatic multi-voltage technology, operating from 100 to 260V, which means the units can be used all over the world. The user-friendly control panel is equipped with a digital display and illuminated push buttons for ease of operation.

**“With each unit adjustable by increments of 1/10th of an f-stop, flash duration is as short as 1/3000 sec and recycling times as brief as 0.2sec.”**

### Judges' verdict:

**“The Multiblitz PROFILUX PLUS series enforces new technological standards, offering photographers a series of reliable and well-built compact flash units suitable for a wide range of lighting needs, with increased flexibility, as the units can be either mains operated or battery operated.”**

### SPEC HIGHLIGHTS

- Designed for mains and battery operation
- Multi voltage: 100-260V
- Halogen tube with 2,000 hours' service life
- Flash duration from 1/3000 sec; recycle time from 0.2 sec
