Reflector RINOS-3 with
honeycomb filter RIWAN-3/S

Multiblitz®

Characteristics:

The standard reflectors provide the highest light-source efficiency and are well suited for lighting setups with one light source (key light, fill-in light, effect light, background light). The character of illumination is quite hard and direct, a more concentrated, restricted lighting set up with darker, clearly edged shadows is possible with a honeycomb filter attached. A soft disc can be used to give the light a smoother, more diffused character.
