

STANDARD REFLECTORS, WHITE +

Codes:

RINOW-2, Ø 30 cm

RINOW-3, Ø 25 cm

V-bayonet

Reflector RINOW-3 with
honeycomb filter RIWAN-3/S

Characteristics:

The standard reflectors provide the highest light-source efficiency and are well suited for lighting setups with one light source (key light, fill-in light, effect light, background light). The character of illumination is quite hard and direct, whereas the white coated reflectors have a softer character than the silver coated reflectors. A more concentrated, restricted lighting set up with darker, clearly edged shadows is possible with a honeycomb filter attached (see left). A soft disc (RISOF-2/-3) can be used to give the light a smoother, more diffused character.
