

REFLECTOR BROLLY, SILVER/WHITE +

Code:

VAREU

P-/ and V-bayonet

SILVER

WHITE

**Characteristics:**

Higher contrast and more brilliant shots with better light-source efficiency can be obtained with the silvered reflecting surface. The white side tends to produce muted shadings of colour but reflects a strongly scattered, soft light which ensures a good rendition of skin tones in portraiture and nude shots. The light can be "focused" to a certain extent by adjusting the brolly receptacle.
