

# REFLECTOR BROLLY, WHITE +

Code:

VARES-BL

P-/ and V-bayonet

## Characteristics:

The white reflecting surface reflects a strongly scattered, soft light which ensures a good rendition of skin tones in portraiture and nude shots. The light can be „focused“ to a certain extend by adjusting the brolly receptacle. Placing the umbrella closer to the subject will result in softer shadows. Soft scattered light is also optimal for smaller still-lives or shots of in-animate objects with chromed object and liquids.
